

Touchless WC Flush Controls are Safe, Hygienic and Convenient

Hygienic, clean, and well flushed, semi-public and public WCs are always inviting to users. With touchless WC flush controls, you ensure the reliable actuation of a flush after every use.

Geberit's range of touchless products match any style with their elegant, easy-to-clean surfaces and highly reliable function and durability.

Meets The Strictest Requirements

Geberit WC flush controls are actuated automatically and touchless when the WC user leaves, or by a hand motion near the visible IR sensor.

In the event of a power failure, manual actuation is also possible. In this way, the WC flush controls meet the strictest hygiene requirements and the dual flush function saves water.

Reliable Proximity Detection

The WC flush controls work using proximity detection. The emitted IR beam is reflected by the user and picked up by

the position receiver. If the user is outside the detection range, he is not picked up.

In contrast to conventional processes, which measure the intensity of the reflected light beam, this active proximity detection guarantees that the user is reliably detected, even if he is wearing dark clothing and in changing light conditions.

Perfectly Hygienic With Pre-Flush And Interval Flush

In addition to the automatic flush or flush actuated by a hand motion, a pre-flush can also be programmed, which triggers a flush before use when the user approaches the WC. A permanently adjustable interval flush, which prevents stagnation in the drinking water pipe, likewise, ensures increased cleanliness and improved hygiene.

Secure Power Supply

For maximum safety during installation and operation, Geberit WC flush controls work with extra-low voltage and plug connections equipped with cross-polarity protection. Individual settings can also be made at a later stage. IR controls and servomotors are pre-mounted. Sigma10 actuator plates with infrared windows can be screwed on quickly and easily.

Geberit's touchless technology combines intelligent functions with convenience, ensuring a heightened sense of freshness and cleanliness in the bathroom.

WASHBASIN TAPS FOR PUBLIC FACILITIES

Elegant and touchless wall-mounted taps, clean washbasins, and enough space between them to wash your hands: This image is often precisely what sanitary engineers, architects and operators envisage when planning public or semi-public sanitary facilities projects.
